

NR-X/NRS-X

Super-Heavy Load LM Guide Model NR-X/NRS-X for Machine Tools

Selection Criteria **A1-10**

Design Highlights **A1-482**

Options **A1-507**

Model No. **A1-577**

Handling Precautions **A1-583**

Accessories for Lubrication **A24-1**

Mounting Procedure **B1-89**

Equivalent Moment Factor **A1-43**

Rated Loads in All Directions **A1-61**

Equivalent Factor in Each Direction **A1-63**

Radial Clearance **A1-73**

Accuracy Standards **A1-79**

Shoulder Height of the Mounting Base and the Corner Radius **A1-492**

Reference Error Tolerance for the Mounting Surface **A1-498**

Dimensions of Each Model with Options Attached **A1-521**

Structure and Features

Balls roll in four rows of raceways precision-ground on an LM rail and an LM block, and end plates incorporated in the LM block allow the balls to circulate. The raceways are cut into deep grooves that have a radius closer to that of the balls than in the conventional design, using special equipment and an extremely precise cutting technique. This design allows high rigidity, high vibration and impact resistance, and high damping capacity, all of which are required for machine tools, thus making these models capable of bearing super-heavy loads.

Notes: Due to the extremely high rigidity of LM Guide units of models NR-X and NRS-X, the construction does not easily absorb the effects of mounting surface misalignment and installation errors. Where such effects arise, there is a risk of reduced operating life and/or malfunction. Contact THK when considering the use of these products.

Improved Damping Capacity

While not performing cutting operations, the LM Guide travels normally and smoothly. While cutting a workpiece, the cutting force is applied to the LM Guide and increases the contact area between the balls and the raceway, allowing an appropriate mixture of rolling and sliding motion to be achieved. Accordingly, the friction resistance is increased and the damping capacity is improved. Since the absolute slip during the rolling and sliding motion is insignificant, it causes little wear and does not affect the service life.

Highly Practical LM Guide

The excessively large differential slip occurring in a Gothic-arch groove does not happen with these models. They smoothly travel and achieve high positioning accuracy during fast feeding. NR and NRS are extremely practical models of LM Guide that generate differential slip appropriate to the cutting load, increase rolling resistance and damping, and improve cutting performance.

High Rigidity

To increase the rigidity of the LM block and the LM rail, which may impact the overall rigidity of the LM Guide in the reverse-radial and lateral directions, THK made full use of FEM to achieve optimal design within the limited dimensional range.

THK offers two identically sized models with different characteristics, namely the radial type Model NR-X and 4-way type Model NRS-X. Users can select the model that best suits their specifications.

Super-Heavy Load

Since the curvature of the raceway is matched to the ball diameter, the ball contact area under a load is increased and the LM Guide is capable of receiving a super-heavy load.

Types and Features

Models NR-RX/NRS-RX

With this type, the LM block has a smaller width (W) and tapped holes. It is used in places where the space for table width is limited.

Dimensional Table⇒ **A1-232/A1-234**

Models NR-LRX/NRS-LRX

The LM block has the same cross-sectional shape as models NR-RX/NRS-RX, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-232/A1-234**

Models NR-SLRX/NRS-SLRX

The LM block has the same cross-sectional shape as models NR-LRX/NRS-LRX, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-232/A1-234**

Models NR-CX/NRS-CX

The flange of the LM block has tapped holes. It can be mounted from the top or the bottom. It can also be used in places where the table cannot have through holes for mounting bolts.

Dimensional Table⇒ [A1-238/A1-240](#)

Models NR-LCX/NRS-LCX

The LM block has the same cross-sectional shape as models NR-CX/NRS-CX, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ [A1-238/A1-240](#)

Models NR-SLCX/NRS-SLCX

The LM block has the same cross-sectional shape as models NR-LCX/NRS-LCX, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ [A1-238/A1-240](#)

Models NR-R/NRS-R

Dimensional Table⇒ **A1-236**

With this type, the LM block has a smaller width (W) and tapped holes. It is used in places where the space for table width is limited.

Models NR-LR/NRS-LR

Dimensional Table⇒ **A1-236**

The LM block has the same cross-sectional shape as models NR-R/NRS-R, but has a longer overall LM block length (L) and a greater load rating.

Models NR-A/NRS-A

Dimensional Table⇒ **A1-242**

The flange of its LM block has tapped holes.

Models NR-LA/NRS-LA

The LM block has the same cross-sectional shape as models NR-A/NRS-A, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-242**

Models NR-B/NRS-B

The flange of the LM block has through holes. It is used in places where the table cannot have through holes for mounting bolts.

Dimensional Table⇒ **A1-244**

Models NR-LB/NRS-LB

The LM block has the same cross-sectional shape as models NR-B/NRS-B, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-244**

¹ Length L shown in the table is the length with the contamination protection accessories, code UU or SS.
If other contamination protection accessories or lubricant equipment are installed, the total block length will increase. (See **A1-521** or **A1-543**)

² D₀ are the pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator.
Pilot holes are not drilled through for models other than those stated above.
For grease nipple mount machining, contact THK.

³ The maximum length indicates the standard maximum length of an LM rail. (See **A1-246**.)

⁴ The basic load rating is for a load in the radial direction.

Use **A1-61** on Table 7 to calculate the load rating for loads in the reverse-radial direction or lateral direction.

⁵ Static permissible moment 1 block: the static permissible moment with one LM block
2 blocks: the static permissible moment with two LM blocks in close contact with each other

Note: For oil lubrication, be certain to let THK know the mounting orientation and where the LM block piping joint should be attached.
(Mounting orientation: see **A1-12**, Lubricant: see **A24-2**)

¹ Length L shown in the table is the length with the contamination protection accessories, code UU or SS.
If other contamination protection accessories or lubricant equipment are installed, the total block length will increase. (See **A1-521** or **A1-543**)

² D₀ are the pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator.
Pilot holes are not drilled through for models other than those stated above.
For grease nipple mount machining, contact THK.

³ The maximum length indicates the standard maximum length of an LM rail. (See **A1-246**.)

⁴ The basic load rating is for a load in the radial direction.
Use **A1-61** on Table 7 to calculate the load rating for loads in the reverse-radial direction or lateral direction.

⁵ Static permissible moment 1 block: the static permissible moment with one LM block
 2 blocks: the static permissible moment with two LM blocks in close contact with each other

Note: For oil lubrication, be certain to let THK know the mounting orientation and where the LM block piping joint should be attached.
(Mounting orientation: see **A1-12**, Lubricant: see **A24-2**)

Model number coding

NR35 CX 2 QZ KKHH C0 +1400L P T - II

Model number

Type of LM block

With QZ Lubricator

Contamination protection accessory symbol

LM rail length (in mm)

Symbol for LM rail jointed use

Symbol for No. of rails used on the same plane

No. of LM blocks used on the same rail

Radial clearance symbol
Normal (No symbol)
Light preload (C1)
Medium preload (C0)

Accuracy symbol
Normal grade (No Symbol)/High accuracy grade (H)
Precision grade (P)/Super precision grade (SP)
Ultra precision grade (UP)

Notes: This model number indicates that a single-rail unit constitutes one set (i.e., required number of sets when 2 rails are used in parallel is 2 at a minimum).

Grease nipples are not installed when there is a QZ Lubricator. Contact THK if you want to use a grease nipple for a model with a QZ. See **A1-547** for contamination protection accessories, see **A1-73** for radial clearance symbol. See **A1-79** for accuracy symbol. See **A1-13** for symbol for number of rails used on the same plane.

¹ Length L shown in the table is the length with the contamination protection accessories, code UU or SS.

If other contamination protection accessories or lubricant equipment are installed, the total block length will increase. (See **■1-521** or **■1-543**)

² D₀ are the pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator.

Pilot holes are not drilled through for models other than those stated above.

For grease nipple mount machining, contact THK.

³ The maximum length indicates the standard maximum length of an LM rail. (See **■1-246**.)

⁴ The basic load rating is for a load in the radial direction.

Use **■1-61** on Table 7 to calculate the load rating for loads in the reverse-radial direction or lateral direction.

⁵ Static permissible moment 1 block: the static permissible moment with one LM block

2 blocks: the static permissible moment with two LM blocks in close contact with each other

Note: For oil lubrication, be certain to let THK know the mounting orientation and where the LM block piping joint should be attached.

(Mounting orientation: see **■1-12**, Lubricant: see **■24-2**)

Model number coding

NR75 B 2 QZ DDHH C0 +1580L P Z T -II

Model
number

Type of
LM block

With QZ
Lubricator

Contamination
protection
accessory
symbol

LM rail length
(in mm)

Symbol for
LM rail
jointed use

With plate cover or
steel tape

Symbol for
No. of rails used
on the same
plane

No. of LM blocks
used on the same rail

Radial clearance symbol
Normal (No symbol)
Light preload (C1)
Medium preload (C0)

Accuracy symbol
Normal grade (No Symbol)/High accuracy grade (H)
Precision grade (P)/Super precision grade (SP)
Ultra precision grade (UP)

Notes: This model number indicates that a single-rail unit constitutes one set (i.e., required number of sets when 2 rails are used in parallel is 2 at a minimum).

Grease nipples are not installed when there is a QZ Lubricator. Contact THK if you want to use a grease nipple for a model with a QZ.

See **A1-547** for contamination protection accessories. See **A1-73** for radial clearance symbol. See **A1-79** for accuracy symbol, specify either plate cover or steel tape. See **A1-13** for number of rails used on the same plane.

Models NR-LB and NRS-LB

Unit: mm

	LM rail dimensions						Basic load rating ¹⁾		Static permissible moment kN·m ⁵⁾						Mass

¹⁾ Length L shown in the table is the length with the contamination protection accessories, code UU or SS.

If other contamination protection accessories or lubricant equipment are installed, the total block length will increase. (See **■1-521** or **■1-543**)

²⁾ D₀ are the pilot holes for when a grease nipple is desired for a product with LaCS or a QZ Lubricator.

Pilot holes are not drilled through for models other than those stated above.

For grease nipple mount machining, contact THK.

³⁾ The maximum length indicates the standard maximum length of an LM rail. (See **■1-246**.)

⁴⁾ The basic load rating is for a load in the radial direction.

Use **■1-61** on Table 7 to calculate the load rating for loads in the reverse-radial direction or lateral direction.

⁵⁾ Static permissible moment 1 block: the static permissible moment with one LM block

2 blocks: the static permissible moment with two LM blocks in close contact with each other

Note: For oil lubrication, be certain to let THK know the mounting orientation and where the LM block piping joint should be attached.

(Mounting orientation: see **■1-12**, Lubricant: see **■24-2**)

Standard Lengths and Maximum Lengths of LM Rails

Table 1 shows the standard lengths and the maximum lengths of models NR-X/NRS-X variations. If the maximum length of the desired LM rail exceeds these values, jointed rails will be used. Contact THK for details.

For special rail lengths, it is recommended to use a value corresponding to the G and g dimensions from the table. As the G and g dimensions increase, this portion becomes less stable, and the accuracy performance is severely impacted.

Table 1: Standard Lengths and Maximum Lengths of LM Rails for Models NR-X/NRS-X

Unit: mm

Model No.	NR/NRS25X	NR/NRS30X	NR/NRS35X	NR/NRS45X	NR/NRS55X	NR/NRS65X	NR/NRS75	NR/NRS85	NR/NRS100

	1830	2360	2360	3090					
	1950	2520	2520						
	2070	2680	2680						
	2190	2840	2840						
	2310	3000	3000						
	2430								
	2470								
Standard pitch F	40	80	80	105	120	150	150	180	210
G, g	15	20	20	22.5	30	35	40	45	40
Max length	3000	3000	3000	3090	3060	3000	3000	3000	3000

Notes: The maximum length varies with accuracy grades. Contact THK for details.

If jointed rails are not allowed and a greater length than the maximum values above is required, contact THK.
