

UNIMOTION

LINEAR UNITS

About Us

Our company was established in 1990 and, since then, it is privately owned. After 7 years of experience in metal processing as a contractor, the company Hypex (Unimotion) was created and operated in the following areas: special purpose machinery manufacture with its own development, trade and assembly in the area of industrial automation.

Due to many years of engineering and substantial engagement in individual problem solving processes, extensive knowledge and experience in the development and manufacture of linear and handling systems were gained. Today we produce mechanical linear units, compact linear units, multi-axis systems as well as customised solutions for high dynamic demands.

Our company's premises, which cover an area of 4500m², offer room for our 75 employees. Production, construction, administration and warehouse; all this can be found under one roof.

Our modern machinery with CNC machining centres and CNC automatic lathes enables high-precision manufacture and really high in-house production depth. For example, we ourselves manufacture shaft drives with tooth washers and our screw ends. This is why, quality, reliability, a good price/performance ratio and short delivery times are harmonised to perfection.

Thus, in the production of our standard linear units as well as individual and complex special linear units, we can guarantee high capacity, flexibility and precision.

At the moment, we export our products in more than 30 countries. Inspired by our customers' demands, Hypex (Unimotion) constantly develops new products and system solutions. So you are welcome to contact us. We look forward to meet you and work on your special project!

Unimotion products
have the quality and
standards to meet
the requirements
of the modern market.

MTJ / MRJ

CHARACTERISTICS

MTJ and **MRJ** Linear Units with toothed belt drive and compact dimensions provide high performance features such as, high speed, good accuracy and repeatability.

They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

The compact, precision-extruded aluminum Profile from 6063 AL with integrated Zero-backlash Ball rail guide system, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

For very high speeds, up to 10m/s, the Track Rollers (journal Bearings) of the type MRJ are particularly suitable.

In the Linear Units MTJ and MRJ is used a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a Zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

The in the Profile slot driving Polyurethane timing belt protects all the parts in the Profile from dust and other contaminations. As optional, a corrosion-resistant protection strip is available.

The aluminum profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches. Also, a Reed switch can be used here.

Different carriage lengths with central lubrication port, allow easy re-lubrication of the Linear Unit and allow the possibility to attach additional accessories on the side.

For the Linear Units MTJ and MRJ various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

MTJ

MRJ

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

MTJ Series

- 1 - Drive block with pulley
- 2 - Corrosion-resistant protection strip (available also without protection strip)
- 3 - AT polyurethane toothed belt with steel tension cords
- 4 - Carriage; with built in Magnets
- 5 - Aluminium profile-Hard anodized
- 6 - Linear Ball Guideway
- 7 - Central lubrication port; both sides
- 8 - Tension End with integrated belt tensioning system

MRJ Series

- 1 - Drive block with pulley
- 2 - Corrosion-resistant protection strip (available also without protection strip)
- 3 - AT polyurethane toothed belt with steel tension cords
- 4 - Carriage; with build in Magnets
- 5 - Aluminium profile-Hard anodized
- 6 - Track Roller (journal Bearing)
- 7 - Two hardened steel Round guide (58/60 HRC)
- 8 - Central lubrication port; both sides
- 9 - Tension End with integrated belt tensioning system

HOW TO ORDER

MTJ - **65** - **700** - **L2** - **250** - **10R** - **1**

Series : _____

MRJ

MTJ

Size : _____

40

65

80

110

Absolute stroke [mm] : _____

(Absolute stroke = Effective stroke + 2 x Safety stroke)

Carriage Version : _____

S : Short (only for MTJ series)

L : Long

Leave blank : For MRJ 40, MTJ 40

Number of carriages : _____

The stated number specifies the number of carriages on one Linear unit (up to 5 carriages available)

Leave blank : For the case of one carriage

Distance between two carriages [mm] : _____

Leave blank : For the case of one carriage

Type of drive pulley : _____

0 : Pulley with through hole

1 : Pulley with journal (with Keyway)

10 : Pulley with journal (without Keyway)

2 : Pulley with journal on both sides (with Keyway)

20 : Pulley with journal on both sides (without Keyway)

3 : Without drive unit

Drive journal position : _____

L : Journal on left side

R : Journal on right side

Leave blank : For type of drive pulley 0, 2, 20 and 3

Protection cover : _____

0 : In profile groove guided Polyurethane toothed belt

1 : Corrosion-resistant protection strip

TECHNICAL DATA

General technical data

Linear Unit	Carriage length Lv [mm]	Dynamic load capacity			Dynamic moment			Max. permissible loads					Moved mass [kg]	Max. Repeatability [mm]	* Max. length Lmax [mm]	* Max. stroke [mm]	** Min. stroke [mm]
		C [N]	Cy [N]	Cz [N]	Mx [Nm]	My [Nm]	Mz [Nm]	Forces		Moments							
								Fpy [N]	Fpz [N]	Mpx [Nm]	Mpy [Nm]	Mpz [Nm]					
MTJ 40	92	4610	/	/	28	90	90	3850	3850	14	75	75	0,28	± 0,08	3000	2876	25
MRJ 40	92	/	3400	1700	20	21	25	1015	1090	13	14	7,6	0,26	± 0,08	6000	5876	0

* For lengths / stroke over the stated value in the table above please contact us.
Values for max. stroke are not valid for multiple carriages
(equation of defining the linear unit length for particular size of the linear unit needs to be used).

** For minimum stroke below the stated value in the table above please contact us.

Operating conditions	
Operating temp.	0°C ~ +60°C
Duty cycle	100%

For operating temperature out of the presented range, please contact us.

i Recommended values of loads

All the data of dynamic moments and load capacities stated in the upper table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor ($f_s = 5.0$)

Modulus of elasticity :

$$E = 70000 \text{ N / mm}^2$$

General technical data for double carriage

Linear Unit	Carriage version	Dynamic load capacity			* Dynamic moment			* Max. permissible loads				
		C [N]	Cy [N]	Cz [N]	Mx [Nm]	My [Nm]	Mz [Nm]	Forces		Moments		
								Fpy [N]	Fpz [N]	Mpx [Nm]	Mpy [Nm]	Mpz [Nm]
MTJ 40	2	9220	/	/	57	4,6 × A	4,6 × A	7690	7690	28	3,8 × A	3,8 × A
MRJ 40	2	/	6800	3400	40	1,7 × A	3,4 × A	2030	2180	26	1,1 × A	1,0 × A

* A - Distance between carriages [mm]. More info on following pages.

i Presented values are for informational purposes only. Exact values can be calculated using our sizing selection tool on Unimotion web site.

Drive and belt data

Linear Unit	* Max. travel speed [m / s]	Max. drive torque Ma [Nm]	** No load torque		Puley drive ratio	Pulley diameter [mm]	Belt type	Belt width [mm]	Max. force transmitted by belt [N]	Specific spring constant Cspec [N]	* Max. acceleration [m/s ²]
			With strip [Nm]	Without strip [Nm]							
MTJ 40	6	3,7	0,4 × nc	0,2 × nc	99	31,51	AT 3	20	235	225000	70
MRJ 40	10		0,4 × nc	0,2 × nc							

* Max. travel speed and max. acceleration of Linear unit with the Corrosion-resistant protection strip is 1,5 m/s and 50 m/s², respectively.
For travel speed and acceleration over the stated value in the table above please contact us.

** The stated values are for strokes (and for distances between the carriages A) up to 500mm. No Load Torque value increases with stroke (and with A) elongation.

TECHNICAL DATA

Mass and mass moment of inertia

Linear Unit	* Mass of linear unit [kg]	* Mass moment of inertia [10 ⁻⁵ kg m ²]	Planar moment of inertia	
			ly [cm ⁴]	lz [cm ⁴]
MTJ 40	$1,3 + 0,0024 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,28 \times (nc - 1)$	$9,7 + 0,0035 \times (\text{Abs. stroke} + (nc - 1) \times A) + 7,0 \times (nc - 1)$	9,8	11,6
MRJ 40	$1,25 + 0,0022 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,26 \times (nc - 1)$	$9,3 + 0,0035 \times (\text{Abs. stroke} + (nc - 1) \times A) + 6,5 \times (nc - 1)$		

*Absolute stroke [mm]

A - Distance between carriages [mm]. More info on following pages.
nc - Number of carriages

i Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Deflection of the linear unit

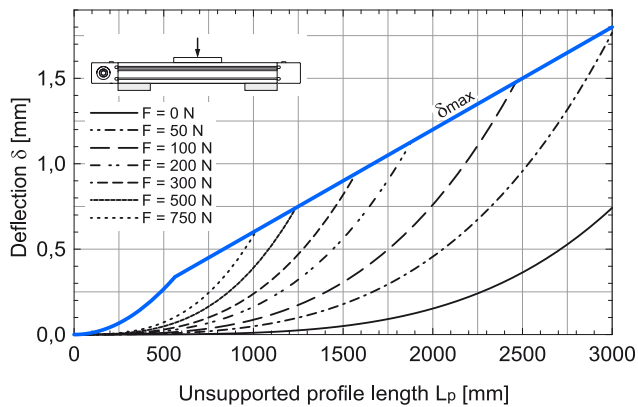

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 Lp Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

MTJ 40

MRJ 40

DIMENSIONS

i Linear Unit doesn't include any safety stroke.
Absolute stroke = Effective stroke + 2 x Safety stroke

i Lifetime lubricated!

i Journal with or without Keyway.

i All dimensions in mm; Drawings scales are not equal.

TYPE 0

TYPE 1 L and 1 R

TYPE 2

DIMENSIONS

i All dimensions in mm; Drawings scales are not equal.

Mounting the drive

- by the **MOTOR ADAPTER WITH COUPLING** (Page 8.020.0)

i Available on request.

Defining of the linear unit length

L = Effective stroke + 2 × Safety stroke + Lv + 32 mm

Lv = 92 mm

Ltotal = L + 135 mm

Left side (L)

Right side (R)

Multiple carriages

i Carriages are connected inside the profile with an aluminium plate (or a toothed belt for the case of longer distances A)

L = Effective stroke + 2 × Safety stroke + Lv + A × (nc - 1) + 32 mm

Ltotal = L + 135 mm

A ≥ Lv + 24 mm **i**

nc - Number of carriages

For the case of A [mm] > A_{lim} : **i**
 - a toothed belt for the connection of the carriages will be used,
 - the following condition must be met:
 $A [mm] = A_{lim} + 3 \times i$,
 where $i \in \{1, 2, 3, \dots\}$.

	MTJ / MRJ 40
A_{lim} [mm]	401,5

MTV

CHARACTERISTICS

The **MTV** series describes Linear Units with precision ball screw drive, integrated guide rail and compact dimensions. They provide high performances features, such as high speeds, good accuracy and repeatability.

They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

The compact, precision-extruded aluminum Profile from 6063 AL with integrated Zero-backlash Ball rail guide system, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

In the Linear Units MTV a precision ball screw, with tolerance class ISO7 (ISO5 on request), with reduced backlash of the ball nut is used.

A corrosion-resistant protection strip, protects all the parts in the profile from dust and other contaminants.

The aluminum profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches. Also, a Reed switch can be used here.

The carriage, with central lubrication port, allows easy central re-lubrication of ball screw and Ball rail guide and provides the possibility to attach additional accessories on the side.

For the Linear Units MTV various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

To achieve higher speeds at the same stroke of the linear unit, the ball screw support system can be integrated. With this feature vibrations and deflections of the ball screw are reduced, therefore longer strokes are possible. The linear unit with integrated support system can have a higher axial load capacity.

Ball screw supports are made out of high quality plastic materials with high wear resistance properties.

Our system enables ball screw support in horizontal or vertical positioning of the linear unit.

A 2LR version of MTV linear unit is available, where two carriages are moving simultaneously in opposite directions. Both right and left handed precision ball screws are used, which are rigidly connected. The ball screw support system can also be integrated.

i 2LR version of the MTV linear unit

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

Standard version

- 1 - Drive block with floating bearing (MTV 110 - fixed bearing)
- 2 - Corrosion-resistant protection strip
- 3 - Ball screw tolerance ISO7 (ISO5 available on request)
- 4 - Carriage; with built in Magnets
- 5 - Aluminium profile-Hard anodized
- 6 - Integrated Linear Ball Guideway
- 7 - Central lubrication port; both sides
- 8 - End block with fixed bearing (MTV 110 - floating bearing)
- 9 - Screw support - SA

2LR version

- 1 - Carriage; with build in right hand ball nut
- 2 - Right hand ball screw
- 3 - Carriage; with build in left hand ball nut
- 4 - Left hand ball screw
- 5 - Central screw support - fixed
- 6 - Screw support - SA

TECHNICAL DATA

General technical data

Linear Unit	Carriage length Lv [mm]	Dynamic Load capacity C [N]	Dynamic moment			Max. permissible loads					* Max. length Lmax [mm]	* Max. stroke [mm]
			Mx [Nm]	My [Nm]	Mz [Nm]	Forces		Moments				
						Fpy [N]	Fpz [N]	Mpx [Nm]	Mpy [Nm]	Mpz [Nm]		
MTV 65	220	19800	158	700	700	6540	10190	94	350	233	2920	2690
MTV 65 2LR	220	19800	158	700	700	6540	10190	94	350	233	5789	2667

* For lengths / stroke over the stated value in the table above please contact us.
Values for max. stroke are not valid for multiple carriages and screw support SA (equation of defining the linear unit length for particular size of the linear unit needs to be used).

Operating conditions	
Operating temp.	0°C ~ +60°C
Duty cycle	100%

For operating temperature out of the presented range, please contact us.

i Recommended values of loads:

All the data of dynamic moments and load capacities stated in the upper table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor (fs =5.0)

Modulus of elasticity

$E = 70000 \text{ N / mm}^2$

General technical data for double carriage

Linear Unit	Number of carriages	Dynamic Load capacity C [N]	Dynamic moment			Max. permissible loads						
			Mx [Nm]	My [Nm]	Mz [Nm]	Forces		Moments				
						Fpy [N]	Fpz [N]	Mpx [Nm]	Mpy [Nm]	Mpz [Nm]		
MTV 65 / MTV 65 2LR	2	39600	316	19,8 × A	19,8 × A	13070	20380	188	10,2 × A	6,5 × A		

* A - Distance between carriages [mm]. More info on following pages.

i Presented values are for informational purposes only. Exact values can be calculated using our sizing selection tool on Unimotion web site.

Ball Screw Drive data

Linear Unit	Ball screw [d × l]	3 Max. rotational speed (Without SA) [rev / min]	1 Max. travel speed (Without SA) [m / s]	Lead constant [mm / rev]	2 Max. Repeatability precision [mm]		Dynamic load capacity BS Ca [N]	5 Max. axial load Fx [N]	Max. drive torque Ma [Nm]	4 Min. stroke [mm]	1 Max. acceleration [m/s ²]
					STANDARD ISO7	ISO5					
MTV 65 MTV 65 2LR	16 × 5	4200	0,35	5	± 0,02	± 0,01	13150	8700	5,5 with Keyway 7,7 without Keyway	40	20
	16 × 10										
	16 × 16										

1 Max. travel speed depends of the length of the linear unit, see diagram for particular size of the linear unit. For travel speed and acceleration over the stated value in the table above or diagrams please contact us.

2 For the ball nut with the preload of 2%, please contact us.

3 With SA or 2LR version the max. rotation speed is limited to 3000 rev / min.

4 For minimum stroke below the stated value in the table above please contact us.

5 In the case of 2RL version the axial load is total axial load of both carriages.

TECHNICAL DATA

Mass, moved mass, mass moment of inertia and no load torque

* Absolute stroke [mm]

A - Distance between carriages [mm]. More info on following pages.

nc - Number of carriages

** The stated values are for strokes (and for distances between the carriages A) up to 500mm.

No Load Torque value increases with stroke (and with A) elongation.

 Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Planar moment of inertia

Linear Unit	Planar moment of inertia	
	I _y [cm ⁴]	I _z [cm ⁴]
MTV 65	71,3	89,4
MTV 65 2LR		

TECHNICAL DATA

Deflection of the linear unit

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

MTV 65

Maximum travel speed as a function of the profile length (V_{max} - L curves)

MTV 65

TECHNICAL DATA

Deflection of the 2LR version

Fixed - fixed mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

MTV 65 2LR

Maximum travel speed as a function of the profile length (Vmax - L curves)

MTV 65 2LR

* Max. length L_{max} of MTV 65 2LR linear unit with 16x10 ball screw.

DIMENSIONS

i Linear Unit doesn't include any safety
Absolute stroke = Effective stroke + 2 x Safety stroke stroke.

n	L_{SA}
0	5,0
2SA	31,0
4SA	62,0

L_{SA} Additional length [mm]

i All dimensions in mm;
Drawings scales are not equal.

2LR version

n	L_{SA}	L_{2LR}
0	5,0	5,0
2SA	31,0	67,0
4SA	62,0	129,0

L_{SA} Additional length [mm]

L_{2LR} Min. distance between carriages [mm]

DIMENSIONS

i All dimensions in mm.
Drawings scales are not equal.

Mounting the drive

- by the **MOTOR SIDE DRIVE - MSD** (Page 7.095.0)
- by the **MOTOR ADAPTER WITH COUPLING** (Page 8.020.0)

i Available on request.

Defining of the linear unit length

i Standard version

$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + 2 \times L_{SA} + A \times (n_c - 1)$
 $L_{total} = L + 48 \text{ mm}, L_v = 220 \text{ mm}$

Multiple carriages

$A \geq L_v$ **i** Connection between the carriages must be provided by the customer
 n_c - Number of carriages

i Version 2LR

$L = 2 \times (\text{Effective stroke} + 2 \times \text{Safety stroke}) + 2 \times L_v + 2 \times L_{SA} + L_{2LR} + A \times (n_c - 1)$
 $L_{total} = L + 48 \text{ mm}, L_v = 220 \text{ mm}$

Multiple carriages

$A \geq L_v$ **i** Connection between the carriages must be provided by the customer
 n_c - Number of carriages

TECHNICAL DATA

MTJ ECO

CHARACTERISTICS

The **MTJ ECO** series Linear Unit is a powerful and cost-effective Linear Unit with toothed belt drive and a Zero-backlash Ball rail guide system for easy and accurate linear movements.

It can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

An extruded aluminum Profile from 6063 AL with on it mounted Zero-backlash Ball rail guide system, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

The linear unit MTJ ECO uses a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a Zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

The aluminum Profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches . Different carriage lengths of the Linear Unit allow the possibility to attach additional accessories on the side.

Lubrication holes on the carriage allow easy re-lubrication of the Ball rail guide .

For the linear unit MTJ ECO various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

- 1 - Drive block with pulley
- 2 - AT polyurethane toothed belt with steel tension cords
- 3 - Carriage
- 4 - Linear Ball Guideway
- 5 - Belt Tensioning system
- 6 - Lubrication port
- 7 - Aluminium profile-Hard anodized
- 8 - End block

HOW TO ORDER

MTJ - **40** - **ECO** - **700** - **L2** - **300** - **10R**

Series : _____

MTJ

Size : _____

40

Type : _____

ECO

Absolute stroke [mm] : _____

(Absolute stroke = Effective stroke + 2 x Safety stroke)

Carriage Version : _____

S : Short

L : Long

Number of carriages : _____

The stated number specifies the number of carriages on one Linear unit (up to 5 carriages available)

Leave blank : For the case of one carriage

Distance between two carriages [mm] : _____

Leave blank : For the case of one carriage

Type of drive pulley : _____

0 : Pulley with through hole

1 : Pulley with journal

10 : Pulley with journal (without Keyway)

2 : Pulley with journal on both sides

20 : Pulley with journal on both sides (without Keyway)

3 : Without drive unit

Drive journal position : _____

L : Journal on left side

R : Journal on right side

Leave blank : For type of drive pulley 0, 2, 20 and 3

MTJZ

CHARACTERISTICS

The **MTJZ** series contains Z-axis Linear Units with toothed belt drive, integrated Ball rail system and compact dimensions. This Linear Units provide high performance features such as, high speed, good accuracy and repeatability by vertical applications.

They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

The compact, precision-extruded aluminum Profile from 6063 AL with integrated Zero-backlash Ball rail guide system, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

In the linear units MTJZ is used a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a Zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

The in the Profile slot driving Polyurethane timing belt protects all the parts in the Profile from dust and other contaminations

The aluminum Profile includes T-slots for attaching sensors and switches. Also, a Reed switch can be used here.

The drive block provides the possibility to attach a Motor or Gearbox housing and additional accessories on it.

Central lubrication port on the drive block allows easy re-lubrication of the Ball rail guide.

For the linear units MTJZ various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

i Multi drive blocks, which travel independently of each other, can be applied.

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

- 1 - Tension End with integrated belt tensioning system
- 2 - AT polyurethane toothed belt with steel tension cords
- 3 - Aluminium profile-Hard anodized
- 4 - Linear Ball Guideway
- 5 - Drive block with pulley, Motor flange; with built in Magnets
- 6 - Central lubrication port; both sides
- 7 - Tension End with integrated belt tensioning system
- 8 - Clamping and braking element for linear guideway

CTJ

CHARACTERISTICS

The **CTJ** series includes Linear Units with a toothed belt drive and two parallel, integrated, Zero-backlash rail guides. Compact dimensions allow high performance features such as, high speed and repeatability. They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

A compact, precision-extruded aluminum Profile from AL 6063, with two parallel, integrated Zero-backlash rail guide systems, allows high load capacities and an optimal sequence for the movement of larger masses at high speed.

In the linear units CTJ is used a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a Zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

The in the Profile slot driving Polyurethane timing belt, protects all the parts in the Profile from dust and other contaminations.

Different carriage lengths with lubrication port allows for easy re-lubrication of the Ball rail guide system and allows the possibility to attach additional accessories. The re-lubrication can also be done through maintenance holes on the side of the Profile.

The aluminum profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches. Also, a Reed switch can be used here.

For the linear units CTJ various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

- 1 - Drive block with pulley
- 2 - Aluminum cover
- 3 - Carriage; with built in Magnets
- 4 - AT polyurethane toothed belt with steel tension cords
- 5 - Aluminium profile-Hard anodized
- 6 - Two integrated Linear Ball Guideways
- 7 - Central lubrication port; both sides
- 8 - Tension End with integrated belt tensioning system

Mass and mass moment of inertia

Linear Unit	Mass of linear unit [kg]	Mass moment of inertia [10 ⁻⁵ kg m ²]	Planar moment of inertia	
			I _y [cm ⁴]	I _z [cm ⁴]
CTJ 90 S	$1,7 + 0,0048 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,20 \times (nc - 1)$	$7 + 0,0031 \times (\text{Abs. stroke} + (nc - 1) \times A) + 4,1 \times (nc - 1)$	13,4	107,0
CTJ 90 L	$2,1 + 0,0048 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,35 \times (nc - 1)$	$11 + 0,0031 \times (\text{Abs. stroke} + (nc - 1) \times A) + 7,2 \times (nc - 1)$		

* Absolute stroke [mm]
A - Distance between carriages [mm]. More info on following pages.
nc - Number of carriages

i Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Deflection of the linear unit

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

CTJ 90

DIMENSIONS

i Linear Unit doesn't include any safety stroke.
Absolute stroke = Effective stroke + 2 x Safety stroke

TYPE 1 L and 1 R

* Lubrication port position:
Long carriage: L/2
Short carriage: L/2 - 23,7 mm

i For lubrication port positions in the case of multiple carriages please contact us.

i Journal with or without Keyway.

TYPE 2

i All dimensions in mm; Drawings scales are not equal.

Defining of the linear unit length

$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + A \times (n_c - 1) + 25 \text{ mm}$ **i**

$L_{\text{total}} = L + 108,5 \text{ mm}$

n_c - Number of carriages

L_v - Long carriage = 156 mm
 L_v - Short carriage = 102 mm

Multiple carriages

i Carriages are connected inside the profile with an aluminium plate (or a toothed belt for the case of longer distances A)

$A \geq L_v$ **i**

For the case of A [mm] > A_{lim} : **i**

- a toothed belt for the connection of the carriages will be used,

- the following condition must be met:

A [mm] = $A_{\text{lim}} + 3 \times i$,

where $i \in \{1,2,3,\dots\}$.

	CTJ 90 S	CTJ 90 L
A_{lim} [mm]	401,5	455,5

DIMENSIONS

i OPTIONAL: TAP / PIN holes available on request.

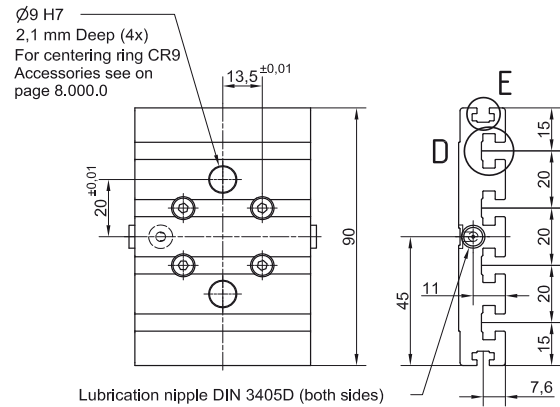

i All dimensions in mm; Drawings scales are not equal.

CONNECTION PLATE

CTV

CHARACTERISTICS

The **CTV** series describes Linear Units with a precision ball screw drive and two parallel, integrated, Zero-backlash rail guides. Compact dimensions allow high performance features such as, high speeds, good accuracy and repeatability.

They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

The compact, precision-extruded aluminum Profile from AL 6063, with two parallel, integrated, Zero-backlash rail guide systems, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

In the Linear Units CTV a precision ball screw, with tolerance class ISO7 (ISO5 on request), with reduced backlash of the ball nut is used.

Two parallel circulating antistatic polyurethane sealing strips and an aluminum cover are ensuring to protect all the parts in the profile from dust and other contaminations.

Different carriage lengths with lubrication port allows for easy re-lubrication of the ball screw and Ball rail guide system and allows the possibility to attach additional accessories. The re-lubrication can also be done through maintenance holes on the side of the Profile.

The aluminum profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches. Also, a Reed switch can be used here.

For the linear units CTV various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

- 1 - Drive block with floating bearing
- 2 - Gap-type seal of antistatic PU strip (recirculating)
- 3 - Ball screw tolerance ISO7 (ISO5 available on request)
- 4 - Carriage; with built in Magnets
- 5 - Aluminum cover
- 6 - Aluminium profile-Hard anodized
- 7 - Two integrated Linear Ball Guideways
- 8 - Central lubrication port; both sides
- 9 - End block with fixed bearing

HOW TO ORDER

Series: _____
CTV

Size: _____
90
110
145
200

Ball screw : _____
CTV 90: Ø12×5, Ø12×10
CTV 110: Ø16×5, Ø16×10, Ø16×16
CTV 145: Ø20×5, Ø20×10, Ø20×20, Ø20×50
CTV 200: Ø32×5, Ø32×10, Ø32×20, Ø32×32

Ball screw tolerance : _____
ISO7 (Standard)
ISO5

Ball screw journal : _____
0 : Without keyway
1 : With keyway
! CTV 90 only available without keyway - 0

Absolute stroke [mm] : _____
(Absolute stroke = Effective stroke + 2 x Safety stroke)

Carriage Version : _____
S : Short
L : Long

Number of carriages : _____
The stated number specifies the number of carriages on one Linear unit (up to 5 carriages available)

Leave blank : For the case of one carriage
! Connection between the carriages is not rigid

Distance between two carriages [mm] : _____
Leave blank : For the case of one carriage

Connection plate : _____
0 : Without
1 : With

Protection cover : _____
0 : Without antistatic PU Gap-type seal strip
1 : With antistatic PU Gap-type seal strip (Standard)
2 : With Corrosion-resistant protection strip

	L2	18480	500	9,2 × A	9,2 × A	7980	18170	500	9,0 × A	4,0 × A

*A - Distance between carriages [mm]. More info on following pages.

i Presented values are for informational purposes only. Exact values can be calculated using our sizing selection tool on Unimotion web site.

Ball Screw Drive data

Linear Unit	Ball screw [d × l]	Max. rotational speed [rev / min]	1 Max. travel speed [m / s]	2 No load torque		Lead constant [mm / rev]	3 Max. repeatability precision [mm]		Dynamic load capacity BS Ca [N]	Max. Axial load Fx [N]	Max. drive torque Ma [Nm]	4 Min. stroke [mm]	1 Max. acceleration [m/s ²]
				Carriage: S [Nm]	Carriage: L [Nm]		STANDARD ISO7	ISO5					
CTV 90	12 × 5	5800	0,49	0,08 × nc	0,10 × nc	5	± 0,02	± 0,01	5000	5000	4,4 without Keyway	30	20
	12 × 10			0,09 × nc	0,11 × nc		10	± 0,02					

1 Max. travel speed depends of the length of the linear unit, see diagram for particular size of the linear unit.
For travel speed and acceleration over the stated value in the table above or diagrams please contact us.

2 The stated values are for strokes (and distances between the carriages A) up to 500mm.
No Load Torque value increases with stroke (and with A) elongation.
nc - Number of carriages

3 For the ball nut with the preload of 2% please contact us

4 For minimum stroke below the stated value in the table above please contact us.

TECHNICAL DATA

Mass and mass moment of inertia

Linear unit	Mass of linear unit [kg]	Planar moment of inertia	
		I _y [cm ⁴]	I _z [cm ⁴]
CTV 90 S	$1,6 + 0,006 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,30 \times (nc - 1)$	13,6	102,6
CTV 90 L	$2,2 + 0,006 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,50 \times (nc - 1)$		

Linear unit	Ball screw [d × l]	Mass moment of inertia [10 ⁻⁵ kg m ²]
	12 × 10	$0,38 + 0,002 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,08 \times (nc - 1)$
CTV 90 L	12 × 5	$0,43 + 0,002 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,03 \times (nc - 1)$
	12 × 10	$0,53 + 0,002 \times (\text{Abs. stroke} + (nc - 1) \times A) + 0,13 \times (nc - 1)$

*Absolute stroke [mm]
A - Distance between carriages [mm]. More info on following pages.
nc - Number of carriages

i Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Deflection of the linear unit

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

CTV 90

DIMENSIONS

i Linear Unit doesn't include any safety stroke.

Absolute stroke = Effective stroke + 2 x Safety stroke

* Lubrication port position:
Long carriage: L/2
Short carriage: L/2 - 24,2 mm

i For lubrication port positions in the case of multiple carriages please contact us.

i All dimensions in mm.
Drawings scales are not equal.

SHORT CARRIAGE

Defining of the linear unit length

L = Effective stroke + 2 × Safety stroke + Lv + A × (nc - 1) + 50 mm **!**

Ltotal = L + 65,5 mm *nc - Number of carriages*

Lv - Long carriage = 100 mm
Lv - Short carriage = 35 mm

Multiple carriages

Amin ≤ A ≤ Alim **!**

! Carriages are connected with non-rigid galvanized steel plates.

	CTV 90 S	CTV 90 L
Amin [mm]	65	130
Alim [mm]	600	665

DIMENSIONS

i All dimensions in mm; Drawings scales are not equal.

i OPTIONAL: TAP / PIN holes available on request.

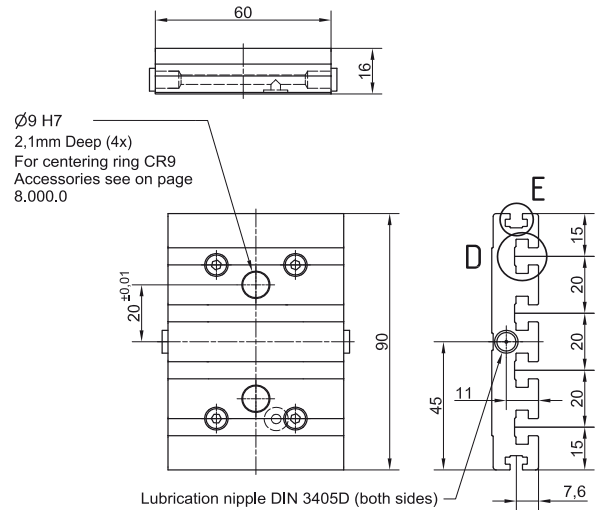

CONNECTION PLATE

CTV 90 L

CTV 90 S

Linear Unit	Plate length [mm]	Weight [kg]	Code
CTV 90 S	60	0,21	103669
CTV 90 L	125	0,44	103668

i Mounting elements for mounting the connection plate on the Linear unit are included.

Mounting the drive

- by the **MOTOR SIDE DRIVE - MSD** (Page 7.095.0)
- by the **MOTOR ADAPTER WITH COUPLING** (Page 8.020.0)

i Available on request.

Maximum travel speed as a function of the profile length (V_{max} - L curves)

TECHNICAL DATA

	32 × 10	$34,59 + 0,069 \times (\text{Abs. stroke} + (\text{nc} - 1) \times A) + 1,57 \times (\text{nc} - 1)$
	32 × 20	$39,31 + 0,069 \times (\text{Abs. stroke} + (\text{nc} - 1) \times A) + 6,29 \times (\text{nc} - 1)$
	32 × 32	$49,12 + 0,069 \times (\text{Abs. stroke} + (\text{nc} - 1) \times A) + 16,11 \times (\text{nc} - 1)$

*Absolute stroke [mm]

A - Distance between carriages [mm]. More info on following pages.
nc - Number of carriages

i Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Deflection of the linear unit

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

CTV 200

DIMENSIONS

i Linear Unit doesn't include any safety stroke.
Absolute stroke = Effective stroke + 2 x Safety stroke

i Journal with or without keyway.

* Lubrication port position:
Long carriage: L/2
Short carriage: L/2 - 53 mm

i For lubrication port positions in the case of multiple carriages please contact us.

i All dimensions in mm.
Drawings scales are not equal.

Defining of the linear unit length

$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + Lv + A \times (nc - 1) + 120 \text{ mm}$ **i**

$L_{total} = L + 108 \text{ mm}$ *nc - Number of carriages*

Lv - Long carriage = 255 mm
Lv - Short carriage = 80 mm

Multiple carriages

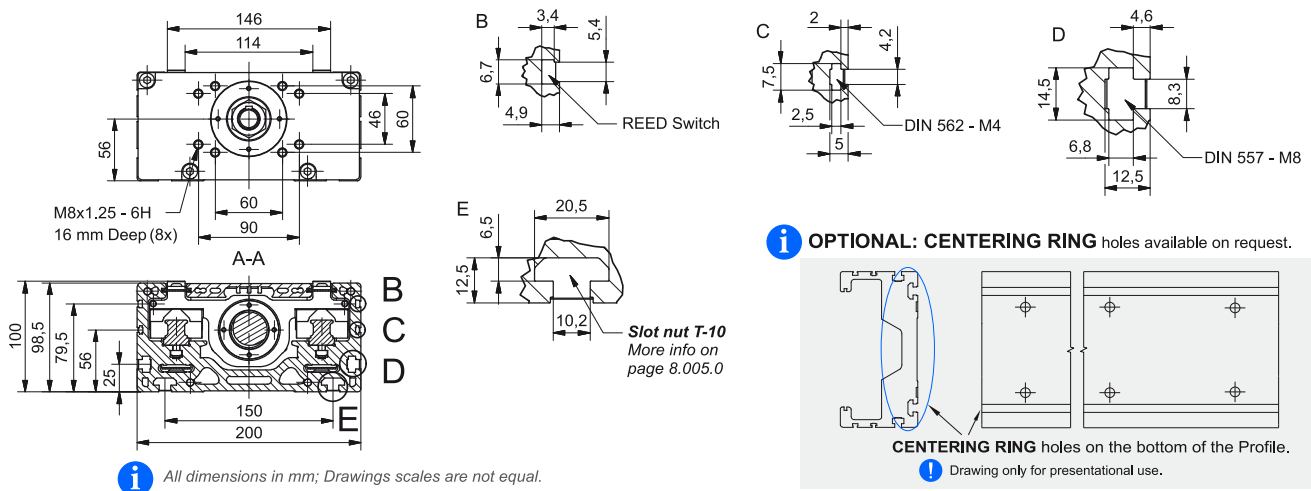

$A_{min} \leq A \leq A_{lim}$ **i**

i Carriages are connected with non-rigid galvanized steel plates.

	CTV 200 S	CTV 200 L
Amin [mm]	130	305
	* 195	* 310
Alim [mm]	900	1075

DIMENSIONS

CONNECTION PLATE

Linear Unit	Plate length [mm]	Weight [kg]	Code
CTV 200 S	190	2,32	103675
CTV 200 L	305	3,75	103674

i Mounting elements for mounting the connection plate on the Linear unit are included.

Please consider our advice in our Maintenance- and assembly instructions

Mounting the drive

- by the **MOTOR SIDE DRIVE - MSD** (Page 7.095.0)
- by the **MOTOR ADAPTER WITH COUPLING** (Page 8.020.0)

i Available on request.

Maximum travel speed as a function of the profile length (V_{max} - L curves)

STRUCTURAL DESIGN

- 1 - Cover
- 2 - Attachment of pulley with clamping set
- 3 - Anodized aluminium housing
- 4- Toothed belt
- 5- Belt tensioning system (elongation and frequency of belt span provided with delivery of unit)
- 6 - Motor
- 7 - Linear unit - CTV / MTV

i The linear unit must be executed with drive journal without keyway, so that the MSD belt drive can be mounted on it.

HOW TO ORDER

MSD - CTV 110 - T2 - 1,5 - MSM040B

(max. drive speed: 3000 1/min; No load torque: approx. 0,5 Nm)

*For a bigger value an additional adapter plate is used. For the case of MTV 40 a thicker plate may be used.

**This is the load which is linearly dependent on the max. drive torque and is generated by the correct pretension of the belt. This load needs to be reduced in accordance with the capabilities of the motor.

***This is an average value. It could differ depending to the motor dimensions.

****Minimum dimension L1 depends on the size of particular clamping set. Values can be found in the table on page 7.105.0.

Ms Screw tightening torque Nm
MT Maximum transmissible torque Nm
CT Torsional rigidity per meter Nm/rad

INSTALLATION

The overall length L_t is best determined as the distance between shaft ends - length L_w plus 2x dimension H .

SELECTION DIAGRAM

Ideal execution for long distance shaft connections. Torque transmission is zero backlash. Designed for lengths up to 4m without bearing support (depending on rotation speed).

Standard lengths available till 3m, for longer lengths please contact us.

HOW TO ORDER

OSR - **19** - **MTJ65** - **LM** - **890** - **F16C** - **F16C**

Type: OSR
Size: OSR: 14, 19/24, 24/28, 28/38, 38/45
 OSR: 19, 24, 28, 38
Linear unit series: MTJ/MRJ/MTJ ECO: 40, 65, 80, 110
 CTJ: 90, 110, 145, 200
Leave blank : not for linear unit
Length type: LM (Middle distance of the linear units)
 Lt (Production length of the sync. shaft)

Option:
C: with keyway
Leave blank: w/o keyway
Hole diameter:
 — one side end hub¹
 --- other side end hub²
Length [mm]

CONNECTION ELEMENTS FOR CONSTRUCTIONS WITH ALU PROFILES

i Linear Unit must be mounted by the aluminium profile and not at the end blocks!

For more details about Alu profiles see **PROFILE TECHNIC** catalogue.

MULTI AXIS SYSTEMS

We offer all necessary fittings including brackets, clamping fixtures and adapter plates in order to build multi-axis systems. Beside standard elements we supply also custom fixing and connection elements manufactured in our workshop.

Service life / Permissible load factor

SERVICE LIFE - LINEAR GUIDING

Mean load comparison factor f_{vm} as a function of service life L_{km}

i Diagrams and equations are valid for:

- MTJ series
- MTV series
- MTJ ECO series
- MTJZ series
- CTJ series
- CTV series

i Presented diagrams are showing theoretically determined service life of the linear guiding when mean load comparison factor f_{vm} is taken into consideration.

Detailed view:

Load comparison factor f_v :

$$f_v = \frac{|F_y|}{C_{dyn}} + \frac{|F_z|}{C_{dyn}} + \frac{|M_x|}{M_{x\ dyn}} + \frac{|M_y|}{M_{y\ dyn}} + \frac{|M_z|}{M_{z\ dyn}}$$

f_v	Load comparison factor	
C_{dyn}	Dynamic load capacity	N
$M_{x\ dyn}$	Dynamic moment capacity about the x axis	Nm
$M_{y\ dyn}$	Dynamic moment capacity about the y axis	Nm
$M_{z\ dyn}$	Dynamic moment capacity about the z axis	Nm
F_y	Applied force in the y direction	N
F_z	Applied force in the z direction	N
M_x	Applied moment about the x axis	Nm
M_y	Applied moment about the y axis	Nm
M_z	Applied moment about the z axis	Nm

Service life calculation:

$$L_{km} = \left(\frac{1}{f_{vm}} \right)^3 \cdot 10^2$$

L_{km} Service life [km]

Safety factor f_s :

$$f_s = \frac{1}{f_{vm}}$$

f_s Safety factor

i The safety factor depends on the application and its requested safety. We recommend a minimum safety factor $f_s = 5.0$

Mean load comparison factor f_{vm} calculation:

$$f_{vm} = \sqrt[3]{\frac{f_{v1}^3 \times s_1 + f_{v2}^3 \times s_2 + \dots + f_{vn}^3 \times s_n}{s_1 + s_2 + \dots + s_n}}$$

- f_{vm} Mean load comparison factor
- $f_{v\ i}$ i-th load comparison factor of a given loading regime $f_v(s)$, $i \in \{1, 2, \dots, n\}$
- s_i i-th travel path of a given loading regime $f_v(s)$, $i \in \{1, 2, \dots, n\}$

Loading regime $f_v(s)$:

PERMISSIBLE LOAD FACTOR f_p - LINEAR GUIDING

$$f_p = \frac{|F_y|}{F_{py}} + \frac{|F_z|}{F_{pz}} + \frac{|M_x|}{M_{px}} + \frac{|M_y|}{M_{py}} + \frac{|M_z|}{M_{pz}} \leq 1$$

f_p	Permissible load factor	
F_{py}	Max. permissible force in the y axis	N
F_{pz}	Max. permissible force in the z axis	N
M_{px}	Max. permissible moment about the x axis	Nm
M_{py}	Max. permissible moment about the y axis	Nm
M_{pz}	Max. permissible moment about the z axis	Nm

SERVICE LIFE - BALL SCREW

Applied mean axial force F_{am} as a function of service life L_{km}

Mean axial force F_{am} calculation:

$$F_{am} = \sqrt[3]{\frac{|F_{a1}|^3 \times s_1 + |F_{a2}|^3 \times s_2 + \dots + |F_{an}|^3 \times s_n}{s_1 + s_2 + \dots + s_n}}$$

F_{am} Mean axial force
 $F_{a i}$ i-th axial force of a given loading regime $F_a (s)$, $i \in \{1,2,\dots,n\}$
 s_i i-th travel path of a given loading regime $F_a (s)$, $i \in \{1,2,\dots,n\}$

Loading regime $F_a (s)$:

i Diagrams presented above are showing theoretically determined service life of the ball screw when mean axial force F_{am} is taken into consideration.

i Diagrams and equations are valid for:

- MTV series
- CTV series
